## PROJECTS

**CampHawk** · Live · camphawk.app
Campsite cancellation alerts. When a booked-up campground opens up, you hear about it within seconds.
8,000+ campgrounds covered · 159,000+ campsites tracked · 15 booking systems · 2,000+ alerts sent · 70+ users since launch in June 2026.

- A service that watches the campgrounds you pick, for the nights you want, across Recreation.gov, ReserveCalifornia, ReserveAmerica and a dozen state park systems, and alerts you by text, push or email within seconds.
- Auto-Cart on Recreation.gov: puts the opened site in your cart, with a plain-English panel on exactly what it will and won't do.

Next.js · TypeScript · Vercel · Postgres (Supabase) · Text and push alerts · Claude Code

**Morning Mail** · In daily use
One morning report for three inboxes: what needs a reply, what's a bill, what's junk.

- Pulls a Gmail account (Google Apps Script) and two Yahoo accounts (IMAP) every morning on a schedule.
- Code rules sort first; an AI read (Google Gemini) summarizes each email and catches what the rules miss. The rules always win, so the AI can't bury a security alert.

Next.js · Postgres (Supabase) · Apps Script · IMAP · Gemini API · Vercel Cron

**Household money tracker** · In daily use
Spending, income and recurring bills for a two-person household, synced from the bank daily.

- Read-only daily bank sync (SimpleFIN) with 90-day backfill, categories, and rules you set once.
- Spots transfers between your own accounts so moving money never looks like spending.

Next.js · Postgres (Supabase) · SimpleFIN · AI document reading · Vercel Cron

**Vectorworks connector** · Built, in testing
Lets an AI assistant draw in, measure and check a Vectorworks rigging plot, the way a head rigger works a show.

- An MCP server that gives Claude tools to draw, measure, read Spotlight data and work a show: datum, departments, venue limits, point loads, bridles, mark-out, revisions.
- A live web panel that talks to Vectorworks on the same computer, never through the internet.

Python · MCP · Vectorworks scripting · Next.js

**Campground site maps** · Prototype
Clickable campsite maps for CampHawk, drawn from public survey data instead of hand-traced pictures.

- Maps drawn from Recreation.gov's open campsite coordinates, with roads matched from whichever public source the sites fit best.
- A review queue with a tracing tool, so a person can fix a road from the aerial photo in a minute.

Node scripts · Open data (RIDB, OpenStreetMap) · SVG · Next.js

## EXPERIENCE

**Key rigging grip, best boy rigging grip, rigging grip** · IATSE Local 80 · film and television · 11 years

- Key rigging grip: plan and run the rig with the key grip and gaffer, lead the crew, and own safety on every lift and hang.
- Best boy rigging grip: crew calls, gear orders, schedules and timecards; keep the rig on time and on budget.
- Rigging grip: build and strike truss, chain-motor points, overhead frames, diffusion and blackouts ahead of the shooting crew.

## SKILLS

| | |
|---|---|
| **Building with AI** | Claude Code · Writing specs and briefs · Breaking work into steps · Reviewing output against the brief |
| **Shipping** | Next.js on Vercel · Postgres (Supabase) · Scheduled jobs (cron) · Deploys and rollbacks · Browser testing |
| **Automation** | Google Apps Script · Email (IMAP) · Bank data (SimpleFIN) · AI APIs (Gemini) · MCP connectors |
| **On set** | Rig planning and load math · Two-leg bridle calculations · Leading a crew · Safety on every lift and hang |
| **Product** | Naming and plans · UX for error and empty states · Accessibility (color-blind safe) · Design hand-offs |
